

Samy Akrm

Vulnerability Analyst & Penetration Tester

samyakrm10@gmail.com | +20-115-603-0660 | 6th of October, Egypt | [linkedin.com/in/samyakrm/](https://www.linkedin.com/in/samyakrm/)

PROFESSIONAL SUMMARY

Cybersecurity student at Beni-Suef National University with a strong focus on Web Application Security and Penetration Testing. Active CTF player specialized in Web exploitation, with experience analyzing backend logic, authentication flows, and authorization mechanisms. Committed to professional development through structured training programs such as DEPI and independent security research.

EDUCATION

Bachelor in Computers and Artificial Intelligence (FCAI)

Beni-Suef National University | Beni-Suef, Egypt | Expected 2026

PROFESSIONAL TRAINING

Vulnerability Analyst and Penetration Tester Track

Digital Egypt Pioneers Initiative (DEPI) - Ministry of Communications (MCIT) | Dec 2025 - Present

- Professional training on security assessment methodologies, penetration testing cycles, and vulnerability analysis.

HCIA-Security V4.0 Course

Huawei | Sept 2024

SECURITY LABS & PROJECTS

Vulnerable Node.js Backend App - Web Security Research | Self-Driven Project

- Developed a backend environment to study vulnerabilities including JWT bypass, IDOR, and File Upload flaws.
- Analyzed middleware and authorization logic to understand the developer perspective on common security weaknesses.

E-commerce Database Architecture - Database Management | Self-Driven Project

- Designed and built a database schema using MySQL (phpMyAdmin) and XAMPP to manage data flows.

STO - Subdomain Takeover Automation Script - Subdomain Enumeration & Takeover Detection | Self-Driven Project [\[GitHub Repo\]](#)

- Automated end-to-end workflow: Subdomain Enumeration, Live Host Detection, Subdomain Takeover Scan, and Potential Vulnerability Report.

ACHIEVEMENTS & COMPETITIONS

Capture The Flag (CTF) Participant - Web Security Specialization

- Active participant in Zinad CTF, FahemSec CTF, and IT-Gate CTF competitions.
- Focused on solving Web category challenges, including manual exploitation of web vulnerabilities and analysis of security misconfigurations.

TECHNICAL SKILLS

Vulnerabilities: IDOR, JWT Exploitation, File Upload Bypass, Path Traversal, CORS, Subdomain Takeover

Tools: Burp Suite, Nmap, Metasploit, Wireshark, SQLmap

Programming: Python (Basics), C++ (Basics), JavaScript (Basics), Java (Basics); SQL (MySQL)

INDEPENDENT LEARNING

- TryHackMe:** Pre-Security Path, Web Fundamentals
- CompTIA Network+ & Security+:** Self-Study
- PortSwigger Academy:** Web Security Academy (Active Player)
